EXP NO:06

Automating business processes using Deluge scripting and workflows with application testing and debugging

Aim:

To automate business processes in the Loan Application Management System using Zoho Creator workflows and Deluge scripting, and to perform application testing and debugging.

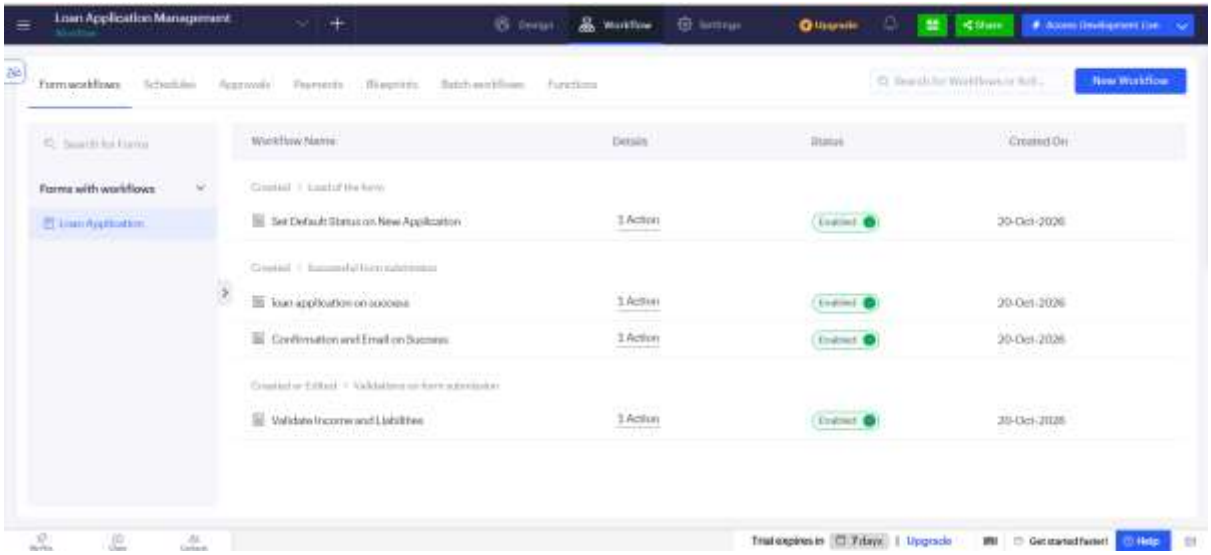

Software Required:

- Zoho Creator
- Web Browser
- Deluge Script Editor

Procedure:

1. Created the Loan Application Management application in Zoho Creator.
2. Designed the Loan Application form with personal, contact, employment, and loan details.
3. Created reports and a dashboard to manage loan application records.
4. Created a workflow named loan application on success that runs after successful form submission.
5. Configured the application status to default to Pending.
6. Used Deluge scripting to automate application processing and validation.
7. Tested the application by submitting valid and invalid data.
8. Identified and corrected errors in the Deluge script.

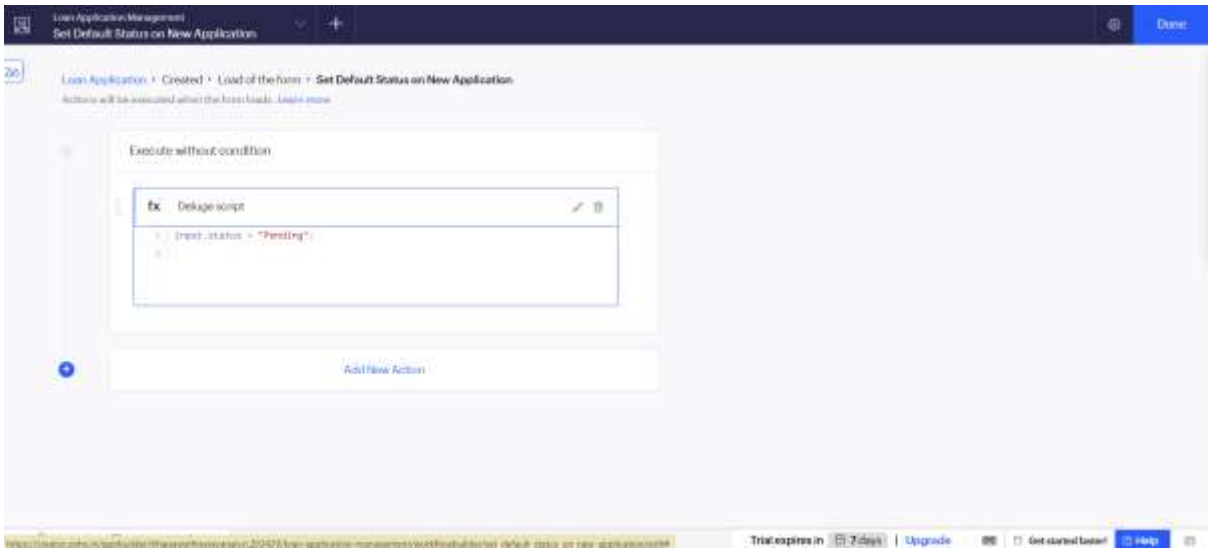

9. Verified that application records were saved and displayed in the reports.

Result

The Loan Application Management System was configured with workflows and Deluge scripting for business process automation. Application testing and debugging were performed to verify data validation and successful record submission.
